Maritime Export Facility Completed on Jones Island, Wisconsin

September 7, 2023, South Haven, Minnesota – Legacy Building Solutions (Legacy) is announcing the completion of The Delong Company’s maritime export facility at the Port of Milwaukee, WI. The 69,000 sq ft facility was designed specifically for DDG (Dried Distiller Grain with Solubles) bulk storage and features a 1,000 lb conveyor, catwalk, and precast concrete walls to keep the product contained. The facility can load 6,000 metric tons daily with an annual export capacity of 160,000 – 300,000 metric tons.

Legacy’s innovative building design allows the company to meet its need for multiple operations in one facility. The building provides all the advantages of a steel structure building with a fire-rated tension fabric that allows for good working conditions in daylight hours.

The White ExxoTec™ Elite PVC fabric with green trim covers the entire building. ExxoTec™ does not corrode and allows natural light into the facility, saving time and money spent installing and maintaining electrical lighting. And because grain is highly combustible, Legacy's ExxoTec Elite fabric is not only flame retardant, but the building frames were also engineered to support a fire suppression system.

Legacy specializes in custom tension fabric structures for more than a dozen industries. Legacy's customizability allows for broader projects and solutions to challenges. Legacy Building Solutions is a construction company in South Haven in central Minnesota. Legacy designs, engineers, manufactures and installs custom tension fabric structures globally.
